_____ / 6 (1 point each)

F Read the article. Then choose the correct answers.

The Science of Scary

Are you one of those people who loves to be scared? Well, you're not alone. There are thousands of people who would rather watch a horror movie than a romantic comedy. But why are people attracted to entertainment that has them jumping out of their skins?

First, we need to understand what fear is. Fear has been described as an emotional response induced by a perceived threat. It starts in a region of the brain called the amygdala, which detects things that stand out. For example, the sight of a bear would trigger a response in the amygdala and prepare the body to take action. It's an important emotion because if we didn't feel it, we wouldn't be able to respond to real dangers. So where does the enjoyment come in?

Some people suggest that when we are afraid we are momentarily distracted from problems in our lives. Other experts say that the enjoyment is not from the fear itself, but from the feeling of tension being released after the fear has passed. It's important to highlight that two other parts of our brain, the hippocampus and prefrontal cortex, help us know whether a threat is real or not. A bear in the wild would produce a different reaction than a bear in a zoo. People watching a movie know it's not real, so they can experience the boost of adrenaline that comes from a scary scene knowing the physical reactions will wear off in time.

If you are in the 10% of the population who gets a thrill from being scared, then you will be pleased to hear that horror movies are becoming more popular with Hollywood studios. They cost little to make, which makes them profitable, and they do well internationally because fear is a universal emotion.

- 1 What does the writer suggest in the second paragraph?
 - A Fear may lead to a physical response.
 - B The amygdala can trigger both fear and enjoyment.
 - C Fear is something that not everybody feels.
- 2 In the third paragraph, the writer says that ...
 - A some people claim that being afraid can solve problems.
 - B people enjoy the anticipation before a scary moment.
 - C the brain assists in evaluating the degree of danger in a situation.
- 3 The writer suggests that the sight of a bear ...
 - A would make everybody either run or freeze.
 - B would produce different emotional reactions depending on the context.
 - C would trigger a permanent rush of adrenaline.
- 4 In the final paragraph, the writer says that horror movies ...
 - A are popular because they are less expensive to watch.
 - B are liked by Hollywood studios partly because they are successful overseas.
 - C make more money than other movies.
- 5 The main purpose of the article is to ...
 - A explain why more horror movies are being made.
 - B describe how some people are afraid of horror movies.
 - C explore fear and why it appeals to certain people.
